/ DEUTEROS

Fast unit tests for Drupal entities without the kernel test overhead.

Francesco Placella

Senior Architect and
Technical Lead

Get realistic Drupal entity behavior in pure unit tests — 1,000 iterations in under 1 second vs 12 minutes with kernel tests. Iterate faster with far less waiting.

Stop waiting for slow Drupal tests.

Unit tests dealing with entities have traditionally required kernel tests because of deep dependencies. Deuteros provides test doubles and scaffolding so fast unit tests can be used instead, delivering real entity behavior without the overhead.

Open source and production-ready.
Used in Tag1 client projects today.
Download the code: **tag1.co/bbh**

Why Deuteros accelerates development:

- ✓ **Real unit tests for entities** – Use UnitTestCase with nodes, users, media, and taxonomy terms
- ✓ **Test doubles that behave like entities** – Pass them around as EntityInterface objects in your test code
- ✓ **Create real entities with mocked dependencies** – Unit test custom bundle class logic quickly and in isolation
- ✓ **Standalone PHP library** – Drop into existing projects without major refactoring
- ✓ **Faster test execution** – Run 1,000 unit test iterations in under 1 second, compared to ~12 minutes with kernel tests

Speed up Drupal testing with Deuteros.
