/ WORKSPACES

Beyond content staging. Workspaces is becoming how Drupal handles governed change across content, config, and AI-assisted workflows.

Andrei Mateescu
Senior Architect & Engineer

Preview, review, and publish sets of changes safely in isolated workspaces. Stable in Drupal core and growing into the layer that keeps content, configuration, and AI-driven changes governed before they reach production.

Stage.
Govern.
Publish.

Workspaces gives Drupal teams a safe way to preview, review, and publish changes in parallel. It is no longer only about content. It is becoming how Drupal governs change across content, config, and AI-assisted workflows on complex enterprise sites.

True site-wide preview built into Drupal Core.
See how every change works together across your entire Drupal experience before you launch.

What makes Workspaces essential:

- ✓ **Preview the entire site with your changes** – browse a complete virtual copy, click through real user journeys, and catch issues before publishing.
- ✓ **Parallel workflows without conflicts** – multiple teams stage content simultaneously in separate workspaces.
- ✓ **One-click publishing for large change sets** – deploy dozens of edits together when approved.
- ✓ **Governed change beyond content** – the same review-before-publish model is extending to configuration and AI-assisted workflows, so nothing reaches production unless you intend it to.
